

IMPROVED PALLET

Abstract of the Disclosure

Pallets used for transferring goods from one place to another may be liable to infestation with pests. Such pest infestation can present a risk of cross-contamination of other good in transit with or stored beside an infested pallet. A pallet is provided which includes at least a load-bearing deck and bearer members therefore. An accessible component, which is located beneath the load-bearing deck and is accessible from a side of the pallet, includes a load-infestation monitoring device.
